Front End Devoloper

Your main task is software development, i.e. technical design and programming. You will contribute to creating smart, easy-to-use web-based games and services for different types of clients such as mobile, tablet and desktop. You develop our games and services in close collaboration with clients, UX and testers. You are responsible for both new development and changes to existing functions - and contribute to creating secure, customer-friendly solutions with very high performance requirements.
